VOL. LVI

No. 9

MAY 1977

SINGLE COPY Rs. 1.25
ANNUAL SUBSCRIPTION Rs. 12

ISSUED MONTHLY BY

THE OFFICE OF THE COMMISSIONER OF LABOUR GOVERNMENT OF MAHARASHTRA.

LABOUR GAZETTE

Started in 1921, the Labour Gazette, issued monthly, is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. It contains statistical and other information on consumer price index numbers for working class, industrial disputes, industrial relations, cases under labour laws, labour legislation, etc. Special articles on labour etc., are published from time to time.

Annual subscription for the year Sept. 1976—Aug. 1977 is being accepted at Rs. 12.

All amounts are payable in advance in Bombay, in full, either by M.O. or Cheques/Drafts drawn on Bombay Banks.

ALL CORRESPONDENCE AND REMITTANCES SHOULD BE

The Commissioner of Labour, "Commerce Centre", Tardeo, Bombay-34: WB (India).

Tel. No. 393651

The Month in Brief

Consumer Price Index Number for Working Class

The Bombay, Solapur and Nagpur Consumers Price Index Numbers for Working Class for the month of March 1977 with the average prices for the year ended December 1960 equal to 100 were 309, 316 and 303 respectively. The Jalgacn, Nanded, Pune, and Aurangabad Consumer Price Index Numbers for Working Class for the month of March 1977 with the average prices for the year ended December 1961 equal to 100 were 296, 328, 298 and 321 respectively.

Industrial Disputes

During January 1977 there were 20 strikes involving 2973 workmen and a time-loss of 22566 working days, as compared to 35 disputes in December 1976, involving 13690 workmen and time-loss of 38728 man days further particulars of industrial disputes are given at pages 889 to 891 of this issue.

Current Notes

Avoiding Delay in Labour Adjudication

In an article published in a recent issue of the *Indian Journal of Industrial Relations*, the author, Dr. Pramod Verma, who is a professor at the Indian Institute of Management, Ahmadabad, attempts to identify the causes of delay in labour adjudication and offers some suggestions for improvement. The author says that the data for this analysis is drawn from the Gujarat situation and the suggestions flowing therefrom are quite likely to be applicable and relevant to other States in the country as the problem of delay is not peculiar to Gujarat alone. The following extracts culled out from the article make interesting reading:

In general, the following reasons may be enumerated for delay in disposal of cases.

- 1. There are three benches of the industrial court and three labour courts and a number of assistant commissioners of labour before whom the representatives of the parties are requied to appear. The unions have a limited number of representatives and even the representatives of the employers are also limited in number. Generally, the union representatives are social and political workers and have varied activities. This is also true of some of the employers—particularly when the employer is a local authority. Because of these circumstances many a time the cases are required to be adjourned to enable the parties to have their representatives before the courts.
- 2. Even when the cases come before the court, bearing in mind the scheme of the BIR Act and the I.D Act, negotiations for amicable setilements are not discouraged. The negotiations between the parties take considerable time and for that purpose cases are required to be adjourned. They are adjourned as desired by the paties for this pupose.
- 3. The questions involved in some cases are sometimes linked with the questions arising in other cases and if negotiations for settlement are going on in either sets of such cases the other sets of cases are required to be adjourned. Even in such cases, the adjournments are given as desired by or at the instance of the parties concerned.
- 4. It is ordinarily not possible to give ex parte awards in industrial matters, particularly in disputes regarding wages, bonus and a number of such other matters. It, therefore, becomes necessary to adjourn the matter from time to time to get the defaulting party before the court. This is equaly true when the parties remain present but do not produce the relevant materials required for adjudication.
 - 5. Cases regarding dismissal and discharge of the workers are given

are made f and are for the interest

6. In m sant with the of the necessare requires to them the is bought being proper full tion. Such especially wemployers.

7. In early dispo

"Anot! practitione approach Section 30 represente the proces

should be

are made for the purpose and such cases naturally require cooling period and are for that purpose delayed. In such cases the delay is generally in the interests of the workers and not the employer.

- 6. In many of the cases the representatives of the parties are not conversant with the court procedure and the requirements regarding the production of the necessary and relevant materials. In such types of cases the courts are required to discuss the relevant points with the parties and explain to them the materials required to be produced. Even when the evidence is bought before the court, the court has to see that the evidence is put in proper form and proper statements are prepared so as to help adjudication. Such methods are more helpful to labour than to the employers, especially when most of the available evidence is in the possession of the employers. All these naturally take considerable time.
- 7. In any case, if either of the parties to the proceedings desires early disposal, top priority is given to such cases and they are disposed of as speedily as possible.

Conclusions

As it has already been indicated, delay in labour adjudication is caused by adjournments sought by both parties to a case. These are sought particularly at the evidence stage, since managements are usually unwilling to produce relevant material and the unions are unable to obtain appropriate information. Nevertheless, the adjournments are inherent in the procedures followed by the courts themselves. It has been pointed out by the Gujarat Labour Laws Review Committee:

Largely in this State, Judges of the Labour Court and Industrial Court/Tribunal have been drawn from the civil judiciary, with the result that they carried with them their deep seated firm belief in adversary system followed in civil courts......The duty to bring evidence resting upon the parties which is an inseparable characteristic of civil justice administered through adversary systems, its malignable concomitant, namely burden of proof and consequences of failure to adduce evidence by the party on whom burden of proving relevant facts rests, all came in its wake. Gradually over course of time, the methodology, the tardiness, the slow drift, the hypertechnical approach evident in Civil Courts raised their ugly head in these Tribunals too. Now, this may be a correct approach for the civil courts but it is certainly not a correct approach where parties are wholly unevenly balanced. The Committee suggested that the adversary system should be replaced by inquisitorial system, wherein the presiding judge should himself be made responsible for collecting necessary material to dispense justice to both parties.

"Another procedural problem relates to the appearance of legal practitioners before the courts. This system has in the past bred a legalistic approach in labour judiciary and has also been responsible for delays. Section 36(4) of I.D. Act provides that a party to a dispute may be represented by a legal practitioner with the consent of the other parties to the proceedings and with the leave of the court concerned. The Committee

ed with the tare going uired to be desired by

n industrial number of the matter t. This is the relevant suggested certain amendments to this provision. It argued that the appearance of legal practitioners should be severely restricted:—

The presiding officer (should) determine whether the case involves such complex issues of law which would necessitate assistance of legal practitioners, and if he is of that view, it would be necessary for the parties to apply and the Presiding Officer should make a speaking order permitting appearance of legal practitioners setting out reasons in support of his decision.

"In the final analysis, it is necessary to refer back to the total quantum of cases being handled by labour judiciary. With the possibility of the existing system of labour administration continuing for some time to come, one may confidently predict that the workload on courts may only increase in the future. Consequently, there is also a case for increasing the number of courts in the State in step with the anticipated case load."

—Industrial Bulletin, dated 15th March 1977.

New Procedures on Resolutions Adopted by ILO Governing Body

New procedures for preliminary control of resolutions, aimed at ensuring due process, were approved on March 8, 1977 by the Governing Body of the International Labour Office. The procedures were submitted by the United States. They will now go to the International Labour Conference for final approval.

Under the new procedures, resolutions can be ruled not receivable if they condemn member States on matters not covered by ILO standards, or if they condemn member States on matters so covered without inquiry under established ILO procedures.

The new procedures provide for examination of resolutions submitted to the International Labour Conference by a panel of independent experts, chosen from the Committee of Experts on the Application of Conventions and Recommendations. The procedures also provide for the right to appeal decisions on receivability to the Officers of the International Labour Conference.

During the discussion, several delegations emphasised the need for giving all member States the protection enjoyed by citizens—the right to objective inquiry into alegations on which a condemnation is sought.

Problem of Absence

While the health of the population in most industrialised countries seems to have improved over the last two decades, this improvement does not appear to be reflected in the level of absence from work due to sickness. For instance, in the United Kingdom the number of working days lost owing to certified sickness absence was nearly 10 per cent higher in 1970-74 than in 1960-64, and similar trends have been found in other countries. Although it is more difficult to judge trends in short-term absences (which are often not included in national figures), it would appear that absence from work is a continuing and may be worsening problem in many parts of the world.

of the er

The many of there was six-year with a pin the scale accurate

offer of

If an organisation wishes to investigate this problem it needs to have adequate information. An important prerequisite therefore is a proper system for the routine collection of absence data based, as a minimum, on a separate record for each employee which includes for every spell of absence the dates of starting and return and the number of working days lost. Elementary though this may seem, the surprising fact is that in many British Companies even this basic information is often not available, which means management cannot evaluate their absence situation efficiently. Indeed, in the authors' experience, companies with very high absence levels often have very adequate absence recording facilities, and may not even be aware that they have an absence problem.

While managers often grumble about their absence problem they do not necessarily do anything about it. The approach to the analysis of absence which we have developed and described in this paper and illustrated by evidence from one firm offers a practical method of evaluating individual absence records and taking action where required. The tools of analysis are not the traditional measures of population group rates of absence based on arithmetic means but the frequency distributions of individual absence records. Percentage points are used, to classify employees into different grades of absence from low to high and thus to provide practical criteria for indentifying good or bad attendance records. On the one hand these criteria provide a picture of the kind of low absence record which can be achieved in the plant; on the other hand they make it possible to identify individuals with high absence records and to study a selected "critical group" of employees in order to gain insight into factors associated with absence and to try out some form of remedial action, for example the warning system introduced by the firm we studied which produced a drop in one-day absences.

We have illustrater the drading method for the most part by classifying employees into four approximately equal-sized absence groups; however, a modification of the method (using more or fewer, larger or smaller subgroups) may be desirable depending on the size of the workforce and the length of the period for which data are available. For instance, one may be interested in studying the absence records of the worst 5 or 10 per cent of the employees rather than the worst 25 or 50 per cent, or one may want to compare three equal-sized groups of employees.

The method can also be used to examine the question of the consistency of individual absence behaviour. The evidence presented shows that there was a substantial degree of consistency in individual records over the six-year period, so that there are grounds for supposing that the employee with a poor attendance record over a number of years is likely to continue in the same vein. However, a single year's record may not provide as accurate a representation of an individual's behaviour. This suggests that studies with a longer time perspective make possible a distinction between isolated episodes involving serious illness and a more general state of ill-health or psychological malaise which requires special attention. They offer opportunities for keeping an eye on occupational health, both in

though

often work terms of studying secular population trends (making allowances for epidemics) and individual absence trends.

What about the records of new entrants and leavers? These are often more difficult to come by and more difficult to handle, because the starting or leaving dates mean that records cover incomplete years so that the individuals have different periods of exposure to the "risk" of absences from work. However, in the factory studied recent recruits to the workforce had a considerably higher record of absence spells (particularly one-day spells) than longer-service employees. This is in sharp contrast to another study, where new recruits had very little absence indeed during However, General Motors operated a full sick-pay the first six months. scheme after two months of employment compared with the other company's six-month delay before sick-pay took effect. In adition, different recruitment policies and labour market situations may have influenced the absence records of the new recruits. As regards employees about to leave a company voluntarily, they tend to have a poor attendance record. A plausible explanation is that some of theese employees may already have been dissatisfied with their job for quite a time while others may have left because of poor health.

Any analysis of the incidence of absence cannot be considered an end in itself. The main aim is one of gaining a better understanding of the problem so that remedial action can be taken, be it to improve the health or the motivation of individuals less well adapted to the work environment than fellow workers with good attendance records. Also, if the analysis pinpoints iobs or circumstances where absence is high among a majority of the employees, attention can be focussed on the type of conditions which seem to give rise to the reaction and on the possibility of altering them. This would involve looking at the work itself and at its organisation as well as the quality of the human relationships in the workshop, the working climate, the inter-relations of employees, supervisors and management. In this context it is worthwhile to mention that the widely publicised work restructuring and job enrichment schemes carried out by the Volve Company were spurred by high labour turnover and absenteeism rates.

The climate of industrial relations is now more sentitive to these issues and more favourable to the application of "conditions-changing" approaches than it was in the 196s. Therefore our absence analysis method, insofar as it makes possible the identification of sources of dissatisfaction and ill-health (which find expression in reactions such as high absence), is of considerable potential importance as regards both improving human relations and reforming jobs.

d Mr. B. C. d Mr. B. C. ess (INTUC) the INTUC in tackling the problems facing the working class. He also urged the Minister to set up special cells for workers at the Centre and the States. The Minister told the INTUC chief also that the Government would accord high priority to the problems of management and make the workers' participation in management "effective and real".

ESI to Spend Rs. 520.9 m. in 1977-78

Under the Employees' State Insurance Scheme a sum of Rs. 520.9 million has been earmarked during 1977-78 for medical benefits to workers. This is about 88.5 million more than that spent during the current year. The contribution by the Corporation will be about Rs. 418.8 million and the remaining by the State Governments. The scheme provides medical care to over 22.1 million beneficiaries in the form of medical assistance and sickness benefits. Of this proposed expenditure, Rs. 221.3 million has been allocated for sickness benefits, Rs. 24.5 million for extended sickness benefits, Rs. 136.8 million for disablement benefits and remaining for other like dependents, maternity and funeral benefits.

Farm Wages Up in All States

All States have revised the minimum wages of agriculture workers. The States have also strengthening their enforcement machinery by appointing more inspectors and claims authorities under the Minimum Wages Act to look after the interest of the agricultural labourers. The Central Government have revised the wages for agricultural workers in the central spheres from September, 1976 which range between Rs. 4.45 and Rs. 6.50 per day according to areas. Previously they were between Rs. 3.50 and Rs. 5.15 per day.

Public Unit Workers to Own Houses

The Central Government has approved a scheme to make workers in the public sector undertaking owners of the houses which they are occupying. To begin with the scheme would be implemented by the largest public undertaking Bharat Heavy Electricals Ltd. Workers of other public sector undertakings, would be covered in due course. The provident fund savings of the workers would be used for making them owners of the houses. The public sector undertakings had already invested Rs. 250 crores in providing houses to the workers. It is hoped that the new scheme would become a pace-setter and the private undertakings also would take up the scheme.

PF-Linked Bonus in State

The Maharashtra Government has decided to introduce an incentive bonus scheme with effect from April 1, 1977, on the lines of the scheme introduced by the Centre, for its employees subscribing to the Provident Fund. Under the scheme an employee who did not withdraw from his provident fund account during the financial year would be entitled to the bonous. The bonus would paid at the rate of three per cent for employees drawing total employment up to Rs. 500 per month and one per cent for those drawing above Re 500 per month. The financial implications of the scheme

I.L.O., Study on Strikes

The result of the ILO worldwide analysis on strikes in 1975 have now been published and highlight the changing, and to some extent contradicting conditions which prevailed in the year, market at it was by the full force of the industrial recession. The analysis identifies that although the number of disputes culminating in work stoppages fell by 14 per cent in 1975 compared to 1974, and the number of working days lost also dropped (by 20 per cent), the number of workers involved in strikes or lock-outs went up slightly from 26 to 27 million.

The analysis is prepared annually from requests for information by the ILO to all countries of the world. Sixty replies were forthcoming to the enquiry this year although the ILO notes that no data came from Eastern Europe or from many countries in Africa, Asia and Latin America.

Days lost per thousand workers employed in manufacture, mining, construction and transport:—

•			·	1975	Percent change on previous year
Australia	• •			1,390	48
Belgium	• •			340	No change
Canada				2,840	+10
France	• •		• •	390	+56
Germany (F.R.	.)			110	+83
Italy		• •		1,640	_ 9
Japan	• •	• •		400	11
Netherlands		• •			
Sweden	• •	• •		20	50
United Kingdo	m	• •		540	— 57

The statistics also show the very different situations in each country. In more than half the number of disputes, their incidence and days lost declined in 1975 often quite considerably. The most noticeable decreases in working days lost came from India (19 million down on 1974), the United States (11 millions less) the United Kingdom (9 million less) and Australia (down 3 million). Certain countries reported very low figures. For example only five disputes involving just 268 workers and representing only 450 working days lost were reported in The Netherlands. Sri Lanka too reported her best figures for nearly 25 years.

In contrast strikes and lock-outs in some countries were responsible for causing record losses in 1975. Nearly 8 million days were lost in Italy, of which more than half were in the services sector. Other countries reporting difficult experiences were Canada (plus 10 million days lost), Peru (plus 2 million), Thailand (7,00,000) and Nigeria (4,00,000).

In total, 32,000 industrial disputes culminating in stoppages, registered in 1975, (37,000 in 1974), and the number of working days lost was 130 million (164 million in 1974).

South African's Industrial Relations System

Under the industrial relations system in South Africa, a trade union must be registered by the government if it is to be entitled to be a party to an industrial council or a conciliation board. Since virtually all wages and conditions are determined, at present, either directly or indirectly by these industrial councils, or the wage board, this means that the black worker has no voice in what his wages, hours and conditions of work shall be. He is emasculated, and virtually powerless under the law and the prevailing custom.

Traditionally, collective bargaining is carried on by registered trade unions and employers operating in more than 100 National Industrial Councils, and the resulting contracts are given legal sanction. The black worker has no voice in this process. Other wages are set by conciliation boards, or the Wage Board, which makes recommendations to the Minister of Labour, who then establishes certain minimum terms for an industrial sector. Again, the black worker has no voice in the process.

The Industrial Conciliation Act of 1950, one of the basic labour laws of South Africa, provides that registered trade unions cannot have black members. Only whites, coloureds and Asians may belong. And since 1956, no trade union may be formed with "mixed" white and coloured and/or Asian members. Those "mixed" unions which existed prior to 1956 must now have separate white and coloured/Asian branches. Again, it should be stressed that blacks may form their own trade unions, but that they may not be registered. Therefore, under the legal machinery of the existing industrial relations system it is very difficult for blacks to form effective unions.

Following the "Durban" or "Bantu" strikes of early 1973, the South African Government pushed through the Bantu Labour Relations Regulation Act of 1973, in an attempt to set up machinery for settling black labour troubles without allowing black workers to really organise into effective trade unions. In actual fact, the law was designed to put an end to the very real threat of the rise of an effective black trade union movement in South Africa. The act provides for "works committees" or "liaison committees", which are in fact, and have been perceived to be by the black workers, the worst kind of pure "company union". The liaison committees, which were at first enthusiastically supported by many employers and now number some 2,000 (as against about 200 works committees), must have at least one half of the members elected by black employees, but the chairman and the remainder of the members may be appointed by the employer. The committees simply do not represent the black workers.

The 1973 act also made it theoretically legal for black workers to strike, but restricted that right effectively as to preclude any real possibility of legal strikes. Before a strike is legal, four restrictive conditions must be met (1) the committees must consider the dispute (and such consideration can be endlessly protracted), and a 30-day cooling-off period must

and the Minister of Labour during the previous year; (3) the workers must not be engaged in "essential activity," as determined by the Minister; and (4) the matter under dispute must not have been referred to the Wage Board for recommendations.

Thus, effectively, there can be no such thing as a legal strike. The black workers obviously resent this sham, and the resulting frustration on their part is understandable. The results have been predictable. While in 1972, prior to the act of 1973, there were only 71 strikes, in 1974 there were 374 illegal stikes involving about 60,000 black wokers. The police were asked to intervene in 69 of these strikes, and 841 people were arrested. That pattern of black labour unrest continued in 1975. Given the situation prevailing in South Africa since June, the statistics for 1976 if they are tabulated at all, will show an astronomical rise.

-AFL-CIO Free Trade Union News

Wage Freeze in Denmark

The Danish Government has announced a three-month wage, rent and price freeze in anticipation of the introduction of a forthcoming collective wage bargaining agreement scheduled for the end of March. At this time the government's incomes policy for 1977 and 1978 limiting wage increases to 6 per cent a year—including 4 per cent cost of living thresholds—will become operative.

Action was necessary in the face of growing labour militancy as union attempted to push through demands before the clamp down. This came to a head with an eight-day unofficial strike by truck drivers and mechanic at Kastrup Airport which spread to oil delivery drivers. The strike cause some offices and factories to close and prompted speculation of an impending political crisis. The strikers were demanding an increase of 30 per cento give them parity with public sector drivers. Before its unsuccessful conclusion, the strike had affected over one thousand drivers.

Industrial relations have rapidly deteriorated over the closing month of 1976 with a greatly increased incidence of strike action. Wages ros by an average of 20 per cent in both 1974 and 1975 and are expecte to show an increase of about 12 per cent in 1976.

-The Financial Times; Incomes Data Service

Mutiny Against work Patterns

A quiet mutiny is spreading throughout the industrialised world again the rigid stereotypes of working time which have restricted too man people for far too long. Every year 2,000 hours must be spent on the job, but must they be so rigidly controlled that workers must be at a certain place at an appointed time and leave when the clock strikes an appointed hour, or go on vacation amid the madding crowd? As hard-and-faconceptions of the over-all span of working life have been modified throughout the world, attention is being focussed on adapting the timetabent of work more closely to the convenience of the worker. Why not convenience of daily toil to a new design enabling man to work and live better?

The present recession does not create a favourable climate for attempt to humanise working time tables. To have a job is all important. However, experiments to reorganise work hours are continuing. Among them are the following approaches.

Flexi-time.—First introduced in the Federal Republic of Germany some 10 years ago, this system has spread widely in Europe. In Switzerland, for instance, 30 to 40 per cent of all wage earners now make up their weekly cr monthly quota of hours in ways which suit them and their employers. Absenteeism, staff turnover, working and commuting accidents and lateness in reporting for work have all been reduced under "flexi-time". Production levels have been maintained—or have even gone up while worker's job satisfaction and morale have increased.

Long weekends.—Three million Americans now work a three to four-day week giving them a longer weekend for leisure and pleasure. However, cetain drawbacks are reported: accidents increase because the working day is too long and many workers are tempted to take a second job instead of joining a bowling team.

Part-time work.—This solution is particularly popular in France, where it involves 1.2 million and in Scandinavia where 760,000 Swedes and 423,000 Danes work part-time. The system is especially appealing to young and older persons, women and those workers wishing to undergo retraining. However, both employers and trade unions tend to oppose it in some cases. The former because welfare costs for part-time workers are higher, the latter because only low-grade jobs are affected by this system.

Staggered plant closures.—Overflowing beaches, deserted cities, high road accident and mortality rates in western Europe in July and August are just the most obvious signs that something is wrong with the system of plant closures for vacation. There is more to it still: in summer, industrial output drops by one-third in France, 15 per cent in Italy and the United Kingdom, and 10 per cent in the Benelux countries.

It is for both social and economic reasons therefore that serious attempts are being made to spread workers' annual leave throughout the year. The principle stumbling block—the rigid school calendar for young children which limits the mobility of working parents.

It concludes that none of the solution so far proposed to change work patterns is perfect, nor is any universally applicable. But each makes a specific contribution to the quest for a new quality of man's working life.

—ILO Information.

DECADE IN INDUSTRIAL PRODUCTION

The total industrial production in the country has gone up by more than 40 per cent during the last decade. The number of factories has gone up from 48,456 in 1965 to 64,217 in 1975. There has been a four-fold increase in the value of output and three-fold increase in the productive capital. From 6,444 crores in 1965 the productive capital increased to Rs. 17,932 crores in 1975.

Notifications Under Labour Laws

Factories Act, 1948

Industries, Energy and Labour Department No. FAC. 1076/357/LAB. 11, dated 19th March 1977. —In exercise of the powers conferred by section 112 read with section 35 of the Factories Act, 1948 (LXIII of 1948), and of all other powers enabling it in that behalf, Government of Maharashtra hereby makes the following Rules further to amend the Maharashtra Factories Rules, 1963, the same having been previously published as required by section 115 of the said Act, namely :---

Payment of Wages Act, 1936

Industries, Energy and Labour Department, No. PWA. 1176(903)/LAB.-7, dated the 1st April 1977¹⁰. In exercise of the powers conferred by clause (a) of sub-section (3) of section 26 of the Payment of Wages Act, 1936 (IV of 1936), in its application to the State of Maharashtra, and of all other powers enabling it in that behalf, the Government of Maharashtra hereby makes the following rules viz. :-

- These rules may be called the Maharashtra Payment of Wages (Amendment) Rules, 1977
- 2. For Form V appended to the Maharashtra Payment of Wages Rules, 1963 the following shall be substituted, namely:-

"FORM V"

(See Rule 19)

ANNUAL RETURN

(This return relates to persons drawing gross wages below Rs. 1,000 per month). Wages and Deductions from Wages.

Return for the year ending on the 31st December 19

- 1. (a) Name of the factory or establishment and postal address.
 - (b) Nature of Industry.
- 2. Number of days worked during the year.

This is the aggregate number of attendances during the year.

[†]The average daily number of persons employed during the year is obtained by dividing the aggregate number of attendance during the year by the number of working days.

Money value of concessions should be obtained by taking the difference of the cost price paid by the employer and the actual price paid by the employees for supplies of essential commodities given free or at concessional rates.

Note.—(1) Information in respect of all columns should be furnished in respect of persons drawing gross (total) salary upto Rs. 1,000 per month only.

⁽²⁾ the return should be filled in correctly in respect of all columns and submitted before 15th February every year.

Consumer Price Index Numbers for Working Class for March 1977

BOMBAY*

309-Index remained constant.

In March 1977, the Consumer Price Index Number for Working Class (New Scries) for the Bombay Centre with base: January to December 1960 equal to 100 was 309 being the same as that in the preceding month. The index relates to the standard of life ascertained during the year 1958-59 family living survey at the Bombay Centre.

The index number for the food group decreased by 2 points to 333 due mainly to a fall in the average prices of rice, jowar, coconut oil, groundnut oil, and vanaspati.

The index number for the pan, supari, tobacco, etc. group increased by 4 points to 349 due to a rise in the average prices of panleaf, supari, katha, bidi and chewing tobacco.

The index number for the clothing, bedding and footwear group increased by 4 points to 309 due to a rise in the average prices of dhoti, saree, shirting, trouser cloth, markin, bush-shirt, full pant, vest and shoes gents.

The index number for the miscellaneous group increased by 1 point to 248 due to a rise in the average prices of Dr.'s fee, durrie, trunk, utensils brass, laundry charges, and tailoing charges for shirt.

The index numbers for the fuel and light group and housing remained unchanged at 378 and 143 respectively.

CONSUMER PRICE INDEX NUMBER (NEW SERIES) FOR WROKING CLASS FOR BOMBAY CITY

SHOLAPUR*

316-A rise of 1 point

In March 1977, the Consumer Price Index Number for Working Class (New Series) for the Sholapur Centre with base January to December 1960 equal to 100 was 316 being 1 point higher than that in the preceding month. The index relates to the standard of life ascertained during the year 1958-59 family living survey in Sholapur City.

The index number for the food group increased by 2 points to 337 due to a rise in the average prices of jowar, grinding charges, arhardal, gramdal, chillies green, chillies dry, onions and tea leaf.

The index number for the pan, supari, tobacco, etc. group increased by 1 point to 282 due to a rise in the average price of bidi only.

The index number for the fuel and light and the miscellaneous groups and housing remained steady at 329, 251 and 184 respectively.

The index number for the clothing, bedding and footwear group decreased by $\bar{1}$ point to 336 due to a fall in the average prices of shirting and markin.

21⁴ 340 AURANGABAD*
321-A rise of 5 points

In March 1977, the Consumer Price Index Number for Working Class for Aurangabad Centre, with base year January to December 1961 equal to 100 was 321 being 5 points higher than that in the preceding month. The index rlates to the standard of life ascertained during the year 1958-59 family survey at Aurangabad Centre.

The index number for the food group increased by 8 points to 353 due to a rise in the average prices of turdal, moongdal, turmeric, chillies dry, tamarind, mixed spices, jeera, potatoes, onions, tomatocs, garlic, other vegetables, banana, tea leaf and prepared tea.

The index number for the fuel and light group remained steady at 322.

The index number for housing remained steady at 217.

The index number for the clothing and footwear group decreased by 1 point to 327 due to a fall in the prices of cloth for trouser and long cloth.

The index number for the miscellaneous group increased by 8 points to 244 due to a rise in the average prices of panleaf, supari, katha and hair oil.

328—A rise of 9 points

In March 1977 the Consumer Price Index Number for working class (New Series) for the Nanded Centre with base January to December 1961 equal to 100 was 328 being 9 point higher than that in the preceding month. The index releases to the standard of life ascertained duirng the year 1958-59 family living survey in Nanded city.

The index number for the food group increased by 16 points to 360 due to a rise in the average prices of rise, jowar, goatmeat, turmeric, chillies dry, gur, chalu chah, and sub-group of vegetables.

The index number for the fuel and light group and housing remained steady at 350 and 166.

The index number for the clothing, bedding and footwear group decreased by 1 point to 302 due to a fall in the average price of long cloth only.

The index number for the miscellaneous group increased by 3 points to 267 due to a rise in the average prices of pan finished only.

JALGAON*

296—A fall of 5 points

In March 1977, the Consumer Price Index Number for Working Clas for Jalgaon centre, with base year January to December 1961 equal to 100 was 296 being 5 points lower than that in the preceding month. The index relates to the standard of life ascerained during the year 1958-59 family living survey at Jalgaon Centre.

The index number for the food group decreased by 9 points to 319 du to a fall in the average prices of rice, groundnut oil, fish fresh, garan masala, onions, other vegetables and sugar.

The index number for the fuel and light group decreased by 5 point to 299 due to a fall in the prices of firewood.

The index number for housing remained steady at 144.

The index number for the clothing and footwear group increased by 9 points to 310 due to a rise in the prices of dhoti only.

The index number for the miscellaneous group increased by 3 point to 257 due to a rise in the average price of cinema only.

298 —A rise of 5 points

In March 1977, the Consumer Price Index Number for Working Class for Poona Centre with base year January to December 1961 equal to 100 was 298 being 5 points higher than that in the preceding month. The index relates to the standard of life ascerained during the year 1958-59 family living survey at the Pune Centre.

The index number for the food group increased by 7 points to 329 due to a rise in the average prices of a rice, jowar, bajri, gramdal, moongdal, dry chillies, potatoes, brinjal, other vegetables, banana and gur.

The index number for the fuel and light group remained steady at 348.

The index number for housing has been kept steady at 130.

The index number for the clothing and footwear group increased by 7 points to 319 due to a rise in the prices of dhoti and saree.

The index number for the miscellaneous group remained steady at 239.
