NATIONAL LABOUR LEGISLATION.

Assam:

Assam Government Proposes Amendment to the Indian Boilers Regulations re. Certificates of Competency of Boiler Attendants.

The draft of certain amendments, proposed to be introduced in the Indian Beilers Regulations, 1924, has been published in the Gazette by the Government of Assam on 15-7-1944. The amendments relate to the award and withdrawal of competency certificates to boiler attendants, and the suspension and cancellation of these certificates under specific circumstances. The certificates are to be in the custody of the employer during the period of the holder's employment under him and are to be submitted to the Chief Inspector of Boilers whenever called upon to de so. The Chief Inspector shall, on receipt of any report from the employer alleging incompetence, mental or physical inefficiency in respect of any of his employee's work or misconduct or negligence on the part of the employee, hold a proper inquiry into the matter and is empowered even to revoke or suspend the certificate if necessary.

The draft is to be taken up for consideration by 1-9-1944.

(Notification No. GGM/87/43/10 dated 15-7-1944, The Assam Gazette, dated 19-7-1944, Part II, pages 693 to 694).

Bengal:

Commercial Firms Bill Introduced in Mangal Legislative Council.

A Commercial Firms Bill (non-official) was introduced in the Bengal tegislative Council by Mr. K.C. Rey Chewdhury on 15-7-1944. The object of the Bill is to regulate security of service, provision for provident fund, gratuity and pension, and life insurance of employees of commercial firms. It is pointed out there in the Statement of Objects and Reasons appended to the Bill that employees and non-manual workers numbering about 100,000 employed in commercial firms in the province find it difficult to maintain a decent standard of living and provide for their old age out of their inadequate salaries. Employees of a few commercial houses enjoy some of the benefits proposed in the Bill; but a wast majority of wealthy firms do not grant any monetary concession to their employees on retirement.

(The Statesman. 16-7-1944).

SOCIAL POLICY.

Fifth Meeting of the Standing Labour Committee, New Delhi, 27-6-1944.+

The fifth meeting of the Standing labour Committee of the Tripartite Labour Conference was held at New Delhi on 27-6-1944, Dr. B.R. Ambedkar, Labour Member, Government of India, presiding. The meeting discussed inter alia, proposals to secure compulsory recognition of trade unions and the constitution of boards of recognition, as embedied in the Indian Trade Unions (Amendment) Bill, 1943 (vide pages 1-2 of our report for November 1943). The employers' representatives, while generally favouring the idea of bringing together employers and workers, seemed to be of opinion that this co-operation should be on a voluntary and non-legal basis. It was felt that with the healthy growth of trade unions, there would be no difficulty as regards recognition. The workers' representatives favoured the idea of compulsory recognition but at the same time pleaded that the scope of the Emenum amending Bill should be widened with a view to conferring more rights and privileges on trade unions.

I proposal to improve the existing statistics of trade disputes in order to have uniformly in the method of compilation on the lines set by the I.L.O. and to improve their utility for purposes of comparison as between provinces in India and with other countries, was also discussed at the meeting. It was suggested that the machinery provided by the Industrial Statistics Act, 1942 (vide page 2 of our report for April 1942), separating the Provincial Governments to collect statistics should be utilised. The general opinion was in favour of the proposal. The alternatives of serving notices on all employers irrespective of the number of their employees or only on those employing lo or more workers were also considered.

(Indian Labour Gazette, July, 1944).

Standing Orders for Large Industrial Undertakings: Views of Millowners Association, Bombay. +

Reference was made at page 2 of our report for May, 1944, to the views of the Bombay Chamber of Commerce on the draft of the Order which the Government of India proposed to issue under the Defence of India Rules Rule State x SlA to provides for standing orders in large industrial undertakings. The following are some of the more important points raised by the Committee of the Millowners' Association, Bombay, in its criticism of the draft.

The Committee was in general agreement with provisions contained in the draft Order as they closely for the provisions of the Bombay Industrial Disputes Act in this relations that however, thought that instead of issuing the Order under the Disputes of India Rules as a wartime measure, it would be desired to be a subject.

In its examination of the dust in detail the

following comments: Some necessary terms have not been defined at all and the definition in respect of others require improvements. It was provided that every employer who employed not less than 250 persons should submit to the specified officer the standing orders regulating the relations between him and his employees. The intention appeared to be to include members of the clerical and other staff. The categories of employees to whom standing orders were to be made applicable should, however, be clearly defined. Separate standing orders had been framed for operatives and the clerical staff under the Bombay Industrial Disputes Act. It is also provided that the employer should submit to the specified officer standing orders with regard to any scheduled matter; but the intention of the order obviously was that Atanding Orders should be framed with regard to all the items mentioned in the Schedule.

As rejerts the procedure to be followed when the employees desired a change in the standing orders, it was thought that change in the standing orders should not be effected unless at least 50 per cent of the employees concerned demanded such a change. This was considered necessary as changes demanded by a small percentage of the employees might not be supported by the majority of the employees.

As regards the Government's query as to the class or classes of industries to which the Order might be applied, the Committee felt that it was not necessary to apply the Order to industries in Bombay Province to which the Bombay Industrial Disputes Act had been made applicable. It was, therefore, suggested that the order should be made applicable to all the factories which were not covered by the Bombay Industrial Disputes Act, subject, however, to the limitation as regards the minimum number employed.

(Excerpts from the Proceedings of the Committee of the Millowners Association, Bombay, during April and May, 1944).

Recolution for Adoption of Payment of Wages Act Massed by Ma Mysore Mass Assembly. +

The Mysere Legislative Assembly, on 5-7-1944, unanimously passed a resolution recommending the introduction of legislation to the State on the lines of the Jayment of Wages Act of British India.

(The Vanguard, dated 8-7-1944).

Conditions of Work

General.

Labour Conditions in Indian Mines, 1941* . +

Number of persons imployed. During the year 1941 the daily average number of persons working in and about the mines regulated by the Indian Mines Act was 347,937 as compared with 328,196 in the previous year. The increase was 19,741 persons or 6.02 per cent. Of these persons 165,356 worked underground, 88,411 in open workings and 94,170 on the surface. The number of men who worked underground, in open workings and on the surface and the women who worked in open workings and on the surface were as follows:-

	Men.		Women.	
en e	1941.	1940.	1941.	1940.
underground		156,238	• •	
In open workings		53,344	32,776	30,241
Surface	64 ,836	41,476	29,334	26,897
Total	285,827	271,058	62,110	57,138

pistribution of Workers: Coal Mines. The daily average number of persons to the persons of these persons 56,927 were males employed in cutting coal, 35,370 were males employed as loaders of coal and 28,745 were weath. The increase in the daily average number of persons employed as in coal mines in 1941, as compared with 1940, is small, whereas the quantity of coal produced is lower. Annual returns received of the number of persons actually at work and also of persons who should ordinarily have been at work but were absent on a selected day in February of each year. Show that on the day selected 262,714 persons were either at work or were prevented from attending work. This figure is 44,434 more than the average number of persons employed in coal mines during 1941.

Workers in other Mines. The number of persons employed in metalliferous (including mice, stone, clay and salt) mines was 129,657 which is 10,634 more than the number employed in 1940. 756,292 were men and 33,365 were women.

Average Output of Coal per Person. Figures of average out-put of coal per person in 1941 show that for British India as a whole, it was 175 tens in the underground and in open workings and 120 tens in above and below ground as against 179 tens and 124 tens respectively in 1939-40. There was a general decrease in the average output of coal per person

^{*} India Wines Act, 1923: Annual Report of the Chief Inspector of Mines in India, for the year ending 31st December 1941; Calcutta: Printed by the Manager, Government of India Press, 1943, pages 180.

5

employed except in Baluchistan and Orissa. In comparing the figures with similar figures in other countries it should be remembered that both men and women are employed in Indian coal mines.

Accidents. - During the year 1941, at mines regulated by the Indian Mines Act, 1923, there were 260 fatal accidents which is one less than in 1940 and 21 more than the average number in the preceding five years. In addition to the fatal accidents there were 1,457 serious accidents involving injuries to 1,489 persons, as compared with 1,410 serious accidents involving injuries to 1,442 persons in the previous year. 303 persons were killed and 1,533 persons were seriously injured. The latter figure includes 44 persons injured in fatal accidents. The number of persons killed was 12 less than in 1940. 290 persons killed were men and 13 were women. In addition, it was reported that 10,969 persons received minor injuries.

causes of Accidents. There was a decrease in the death rate of men employed underground and on the surgace and an increase in open workings. With respect to women there was a decrease in the death rate in open workings and an increase on the surface. The causes of the fatal accidents have been classified as follows:-

	No. of fatal accidents.	Percentage of total number of fatal accidents.
Misadventure	209	.39
Fault of deceased	14	5.38
Pault of follow workmen	6	2.51
Fault of subordinate officials.	21	8.08
Fault of management	7	2.69
Faulty material	3	1.15
Total	260	100.00
	Committee of the large of the committee of the second of the committee of the second o	and the second state of th

Inspections and prosecutions.— During the year 1,214 mines were inspected, many of them being inspected several times. 3,428 separate inspections were made. The cause and circumstances of nearly all fatal accidents and serious accidents of importance, and all complaints of breaches of regulations and rules were investigated. Many inspections were made at the invitation of mine-owners, superintendents and managers desirous of obtaining advice on safety matters. In the major coalfields a large portion of the time of the Inspectors was occupied in investigating cases of actual or threatened damage to decling and roads by reasons of the underground working of coal mines, in dealing with underground fires and in examining protective works against the risk to of inundation. In addition, a large number of inspections of the sanitary conditions at mines were made by medical officers as ex-officio Inspectors of Mines.

puring the year 57 prosecutions were launched involving 118 persons; 75 of the persons prosecuted were convicted. The case against 24 was pending at the end of the year, while that against 13 was withdrawn or terms dropped, in one case due to the death of the person prosecuted; 6 were acquitted.

protective Equipment. The Chief Inspector reports the extended use of bamboo safety hats" particularly in depillaring areas. In Jharia exattive coalfield alone 32,541 of these hats were worn during the year, and a number of cases are on record where they have been the means of preventing serious accidents. Small pieces of roof stone

fatal injuries on workers, whose that heads have been unprotected, but by the use of these safety hats a number of accidents of this nature have been avoided. Many mines in the major coalfields of Jharia and Raniganj have introduced these hats during the year. The opinion is expressed that there appears no reason why they should not be used wherever practicable, as they are cheap and it does not require much effort by the managements to persuade the workers to wear these hats, particularly when the benefits to be derived from their use have been explained.

Working of Indian Boilers Act in Madras during 1943-1944 ...

The report of the Chief Inspector of Boilers, Madras, on the working of the Indian Boilers Act in this the Presidency, Coorg and Bangalore Civil and Military Station, for the year 1943-44, shows that the number of boilers on the registers of the Madras Province, Coorg and Bangalore Civil and Military Station was 3,147, 11 and 30 respectively. 3,189 inspections were made and 1,607 certificates were issued. The total number of boilers with defects that rendered them unfit for working at the year was 75. It was noted that greater interest was taken by the owners of boilers to follow the recommendations made by the Boiler Department for the treatment of boiler feed water, and upkeep and maintenance of boilers. The total number of accidents to boilers during the year was eleven. Except for bulges and perforations there was no serious accident or explosions, resulting in any injury or loss of life of the operatives.

(The Hindu, dated 31-7-1944).

mm

ECONOMIC CONDITIONS.

Railway Standing Finance Committee Meeting:
Decisions re. Purchase of Rolling Stock,
Fremature Termination of B.N. Railway Contract
and Opening of Grocery Shops for Railway
Employees.

The Standing Finance Committee for Railways, at its meeting held at New Delhi on 21-7-1944 under the Chairmanship of Mr. Zahid Husain, Financial Commissioner for Railways, approved the programme of purchasing requirements of rolling stock of railways for the year 1945-46, costing about Rs. 600 million, and also the machinery programme involving about Rs. 20 million. The Committee emphasised the desirability, in executing the programmes, of exploiting, in the first instance, the indigenous resources in the country to the maximum capacity, and orders being placed thereafter with the United Kingdom in preference to any other country, the United Kingdom market being financially more favourable to India than that of other countries.

The Committee was informed that negotiations for the premature termination of the Bengal Nagpur Railway Company's Contract had now reached a definite stage and that the Home Board of the Company had agreed to the terms proffered by the Government of India, The contract would terminate on 30-9-1944, and the Company would be paid, in addition to the value of its stock at par, a premium of £20 for every £100 of its share with the acquisition of B.N. Railway all the major railway systems in the country would have come under State-management.

The Committee also approved the opening of grocery shops for railway employees.

(The Vanguard, dated 23-7-1944).

Collection of Agricultural Statistics: Bengal Covernment's decision to set up Machinery.

The Bengal Government has decided to take immediate steps to set up suitable machinery for the collection of agricultural statistics by plot to plot enumeration of the different crops throughout the year and by random sampling Entert survey.

The existing machinery of the Jute Regulation Department will be utilized and a number of village patwaris will also be appointed for the enumeration work. The scheme is likely to cost Rs. 2,200,000. As some time will elapse before the entire machinery is set up, the plot to plot enumeration will be attempted from the aman crop season during the current year. As regards the sampling livery survey, a scheme is already in operation in the Civil Supplies Department under the guidance of Prof. P.C. Mahalanobis. It is now intended to expand the organisation to ensure the collection of more accurate figures for smaller areas. The survey will be conducted for three years to enable Government to decide the relative merits of the two methods. The randon sampling survey will cost Rs.600,000.

(Bulleting issued by the Indian Central Jute Edmmittee, June, 1944).

Scientific and Industrial Research In India: SIF S.S. Bhathagar's Review.+

Outlining the work done by the Council of Scientific and Industrial Research, Sir S.S. Bhatnagar, Director of the Council, told a representative of the Associated Press of India on 5-7-1944 that the Council now financed over 120 research schemes in universities and other institutions throughout India. It received an annual grant of Rs. 1 million from the Central Government. In addition, very large grants had been made to the Council by industrial interests and individuals interested in the work. The Council itself had earned about Rs. 168,024 on processes leased for commercial Explainment exploitation.

The work of the Council was carried out through the Director and 20 research committees, each of which had its own personnel, consisting entirely of experts. In the laboratories of the Director, over 100 research problems had already been successfully worked out, and included in those were many of vital importance to the war effort. Over 40 important processes worked out in those laboratories had been transferred to Government, after successful development, for defence purposes. These included plastics, varnishes, cements, special-purpose cloth, lubricants, paints, enamels, glass substitutes and research chemicals. All of these were from indigenous raw materials.

Explaining the singlest object of the seven Indian Scientists (himself being one among them) who are due to leave for England by the end of July 1944 (wide page 40 of our report for April, 1944), this he said that It has be gain by consultation with the British council, we head information to be used for the further development of research in India.

Referring to the post-war expansion of the Council, he said that the Central Government attached such importance to its further development that it had promised a capital grant of Rs. 10 million within four years of the cessation of hostilities, and had allotted 80 acres of land in Delhi for the construction of research laboratories. Plans had been drawn up and sites obtained for the construction of a chain of such laboratories. Construction had begun of the Central Glass and Silicate Research Institute at Calcutta and the Central Fuel Research Institute at Dhanbad. Others would be located at Fooma (National Chemical Laboratory), Delhi (National Physical Laboratory) and Jamshedpur (National Metallurgical Laboratory). Indian industrial interests had also contributed generously for the opening of these laboratories.

Sir S.S. Bhatnagar hoped to see co-operative research organisations established in India on the lines of those functioning in the United Kingdom. This had been found to be the best way of promoting industrial development in the country without negativing individual effort. The Research Planning Committee was now investigating this line of development.

(The Times of India, 8-7-1944).

Industrial Progress in Bombay during 1942-1943: Industries Director's Report.

According to the annual report on the working of the Industries Department, Bombay, in 1942-1943, the industrial progress of the Province continued to be satisfactory.

steady Growth of Industries. Apart from the exodus of labour from certain areas due to war developments and stoppages resulting from political turmoil, practically full employment prevailed in all the major industries. Due to heavy demands to meet war orders and to inflationary tendencies, there was a steep and continuous rise in the prices of industrial goods and the profit-margin was substantial. A dearth of consumer's goods led to the extension of Government control and some goods — among them sugar, paper, iron and steel — were rationed. Working factories increased from 3,621 in 1941 to 3,719 in 1942, and many existing factories carried out extensions resulting in increased production. Many factories worked two or three shifts.

Industrial Expansion from 1938 to 1943. Economic and industrial conditions favoured the flotation of new joint-stock concerns. In five years, from 1938-1939 to 1942-1943, the number of companies registered each year increased from 138 to 340, and authorised capital increased from Rs. 1,188,000 to Rs. 180,873,000. War developments have brought about great changes in the industrial structure of the Province. The trend of expansion and employment has been almost continually upward, which is shown by the total number of factories and workers employed as compared to 1938. In these five years, the number of factories has increased by 1,224 to 3,719; and the average number of workers employed by 172,221, from 479,103 to 651,324. Part of this increase is due to small concerns employing between 10 and 20 persons having been brought on the register for the first time under the Indian Factories Act. Among new enterprises established during the year under report were the manufacture of sulphuric acid, laboratory chemicals, synthetic dye-stuffs, glass bottles and strawboard.

The Industries Department assisted industry in a number of ways — by providing advice and estimates to persons wishing to establish new industries and to concerns extending their plants, by solving problems of manufacture, by the provision of financial aid and by carrying out research.

Cottage Industries .- The Department continued to assist cottage industries at practically every stage of production. Instruction in improved methods of production was imparted by peripatetic schools and demonstration parties to industries like cotton and wool-weaving, dying and printing, the cane and bamboo industries, lacquer and fibre working, Financial assistance was given to cottage workers tanning and pottery. trained in the Department's institutions and to educated unemployed, to the extent of Rs. 42,896 in the case of the former and Rs. 37,065 in the case of the latter. Satisfactory progress was recorded in the marketing of the products of cottage industries. Eight of the nine District Industrial Co-operative Associations were engaged in the production of cotton testiles, blankets and other goods for the Supply Department, Government of India, whose orders totalled over Rs. 2.2 million. sales effected by the Associations increased considerably, the total being close on Rs. 2.6 million, including war orders.

Fisheries. The number of fishing launches has increased, at the end of the fishing season, from eight to ten. The amount of fish brought in by these launches showed a slight increase over the previous year, from 2,724,033 lb. to 2,834,169 lb. The Rombay Government has sanctioned the establishment of two fisheries schools, one at Ratnagiri and the other at Karwar, to provide special instruction suited to fishermen. The schools opened in November, 1942, with 180 students. Development of fresh-water fisheries also continued to make progress.

Technical Education. The number of technical and industrial schools was 77, of which six were Government institutions, four were Government reformatories and settlement schools and 28 were maintained by public and private bodies aided by the Government. The other 39 were recognised by the Government only for inspection and examination. Of the 2,226 candidates who appeared from these schools at the annual examinations in courses recognised by the Government, 1,758 (78 per cent) were successful. The number of students undergoing training under the Government Apprentice Scheme during the year was 347, of whom 236 were in Bombay Centre and 111 at Ahmedabad.

(Press Note dated 24-7-1944, issued by the Director of Information, Bombay).

Working Class Cost of Living Index for Various

Textile Industry.

The Cotton Textiles Fund Ordinance, 1944, (Ordinance No. XXXIV, 1944)

ing a fund for supervising the exports of cotton cloth and yarn, and for the development of technical education, research and other matters in relation to the cotton textiles industry in India Mas been promulgated by the Government of India on 8-7-1944. The Fund will be raised by levying a duty of customs on all cloth and yarn manufactured in India and exported from British India at the rate of three per cent of the prevailing maximum ex-factory price. The Fund will be administered by a body called the Cotton Textiles Fund Committee.

(Ordinance No. XXXIV dated 8-7-1944 of the Government of India, reproduced in the Bombay Government Gazette dated 18-7-1944, Part IV, Pages 173-176).

SOCIAL INSURANCE.

programmer of Provident Fund Facilities to Fresh

According to a Press yete issued by the Government of India on 27-1944. The second has recently decided to extend the benefits of the status military regulates. Invespective of pay or status, who have three years' service and ever. It points out that while the higher-paid railway employees helically been a subscriber to the fund, the extension of the color to the large-paid staff was first begun in 1941 when those with 16 persons and ever were allowed to join the fund. A further limit was made in regard to all those with ten years' service and ever and the present extension down to those with only three years' service will afferd to a large body of railwaymen an opportunity of making more adequate prevision for their old age than has been possible in the past.

AGRICULTURE .

The Pihar Tenancy (Second Amendment) Fill, 1944.+

The Eihar Government has on 22-7-1944 gazetted the Bihar Tenancy (Second Amendment) Bill, 1944, introducing certain amendments in the Bihar Tenancy Act, 1885, to promote the Grow More Food Campaign. The object of the Bill, as stated by Government, is as follows: In the province of Bihar large areas of Bakasht Hand (waste) lands have come into the possession of landlords in recent years as a result of the last economic depression. But the landlords are unable to arrange for the cultivation of these lands to the best advantage owing to the provisions in the Bihar Tenancy Act conferring upon the raiyat cultivating the land rights of occupancy or non-occupancy according as the tenant is or is not a settled raiyat of the village concerned. The Bihar Tenancy (Second Amendment) BIII, 1944, is designed to encourage the landlords to settle as much supplus land as pp possible and thereby help the promotion of the Grow More Food Campaign. The provisions of the Bill safeguard the reasonable rights of both the lessor and the lessee and querely permissible in character.

Amendments with the same purpose are being introduced in the Chota Nagpur Tenancy Act, 1908, by the Chota Nagpur Tenancy (Second Amendment) Bill, 1944, gazetted by the Government on the same date.

(The Bihar Gazette, dated 26-7-1944, Part II, pages 582 to 587).

CO-OPERATION AND COTTAGE INDUSTRIES.

Grants to Develop Small-Scale Industries in Mysore State. +

The Government of Mysore has sanctioned a scheme for the grant of small advances to educated men in the State to encourage them to develop small-scale industries. The grants will be made to educated unemployed persons who are subjects of the State and have acquired some training in any industry. Loans will also be advanced to those already in business, industry or trade and are desirous of developing their business. The grants will not ordinarily exceed Rs. 1,000 and will in no case exceed Rs. 2,000 without the special sanction of Government. Half the amount will be treated as a subsidy to the grantee and the other half will be treated as a loan, free of interest, payable in easy monthly instalements spread over five years, the payment of the first instalment being due 18 months after the grant is made.

(The Times of India, 11-7-1944).

The Bihar Co-operative Societies (Amendment) Bill, 1944.+

An Official Bill to amend the Bihar and Orissa Co-operative Societies Act, 1935, has been Gazetted by the overnment of Bihar on MEXERGEN 15-6-1944. The "Statement of Object and Reasons", points out that the scheme for the rehabilitation of the co-operative movement, which was adopted by the Government of Bihar in 1941, has been successfully introduced in a number of central co-operative banks. Members of primary societies, however, constitute a very small fraction of the total agricultural population, and owing to the system of joint and unlimited liability involved, any large increase in their number does not seem possible in the near future. Despite the rehabilitation scheme, therefore, the problem of agricultural finance remains unsolved to a great extent. It is proposed to introduce a scheme for extending the activities of the Bihar Provincial Co-cperative Bank, Limited, on the lines of the Credit Agricole d' Egypte. Under this scheme, advances of improved seeds, manure and implements, and advances against the pledge of produce, will be made to cultivators on a large scale. These new marker advances will be made available to all cultivators who wish to have them, irrespective of whether or not they are members of co-operative societies. In the IR case of memberagriculturists, the Provincial Bank Will make the advances to the society and the latter will, in its turn, grant the advances to its members. In the case of non-member agriculturists, the Provincial Bank will make the advances directly to them. The finances of most of the primary societies and central co-operative banks are at present at a low ebb, but

the Provincial Bank has sufficient funds for investment. The Provincial Bank will, therefore, finance the new business from its own resources, employing reconstructed central co-operative banks as its agents for handling the relative transactions. These banks will work in close co-operation with the Agricultural Department which will continue to maintain the seed and manure depots for the present and give the necessary technical advice. It is hoped that this new scheme will greatly help the immediate Grow More Food Campaign and also the post-war agricultural development of the Province.

In order to give effect to the scheme, it was found necessary to amend certain sections of the Bihar and Orissa Co-operative Societies Act, 1935.

(The Bihar Gazette Extraordinary, dated 16-6-1944).

The Chota Nagpur Tenancy (Amendment) Bill, 1944.

The Government of Bihar has on 22-7-1944 gazetted the Chota Magpur Tenancy (Amendment) Bill, 1944, to make certain amendments in the Chota Nagpur Tenancy Act, 1908, so as to enable the Provincial Co-operative Bank to extend its activities to the Chota Nagpur Division. The Statement of Objects and Reasons appended to the Bill points out that the restrictions on alienation of land in the Chota Nagpur Division have been an obstacle to the development and administration of the co-operative movement to the extent that a raiyat has nothing to pledge except his personal credit. To promote the systematic improvement of agriculture, Government proposed to introduce a scheme under which the Provincial Co-operative Bank (which is a Society registered under the Co-operative Societies Act) will advance improved seeds, manures and agricultural implements and grant advances against produce on a large scale not only to members of Co-operative Societies but also to cultivators who are not members. This scheme cannot be extended to Chota Nagpur unless lands are made dails liable for sale for the realisation of the dues of the Provincial Kankix Bank Hence the Bill.

(The Rihar Gazette, dated 26-7-1944, Part II, pages 381 to 382).

Conference of the All-India Cooperative Institutes' Association and the Indian Provincial Cooperative Banks' Association

A conference of the All-India Cooperative Institutes! Association and the Indian Provincial Cooperative Banks! Association Experimental was held at Bombay during the last week of July, 1944. The conference, which concluded on 30-7-1944, passed several important resolutions on industrial cooperation, marketing, and other cognate matters.

resolutions. Cooperatives in Post-war Reconstruction. By its resolution the conterence urged the Government to utilise cooperative organisations to the fullest possible extent in the following spheres of the country's economic life: (1) Bringing under cultivation of waste and unreclaimed lands and the introduction of co-operative farming; (2) The introduction of better farming, including the supply of improved varieties; (3) Extension of facilities for irrigation through wells and minor irrigation works; (4) Organisation of the supply of milk and milk products and improvement of the breed of cattle; (5) Multiplication of health units in rural areas; (6) Reorganisation of the distributive trade; (7) Development of industrial insurance and insurance of crops and cattle; (8) Organisation of the production of consumer goods through cottage industries; (9) Extension of banking facilities in rural and semi-urban areas; (10) Development of adult education in rural areas; and (11) The organisation of labour.

cottage Industries. By another resolution the Conference expressed the beller that the time an had come for the establishment of a cottage industries organisation society in various provinces and States, which will be in charge of the work of promoting the formation of industrial co-operatives in rural as well as urban areas, securing for them facilities in the matter of raw materials, credit and marketing and assisting in the improvement of the technique of the industries. The conference urged that such an organisation society should be liberally assisted both by the Central and the Provincial Governments. The conference also urged that, in order to ensure a fair price for the grower and to promote regulated marketing, efforts should be made to organize agricultural marketing societies in all parts of the country.

consumers' Cooperatives. The resolution on consumers' cooperation recorded the growth of the consumers' cooperative movement during recent years, and recommended that in all provinces and States where the number of consumers' and supply societies had been organised on proper lines their agency should be fully utilized by the authorities of the Civil Supplies Department for the procurement and distribution, both in wholesale and in retail, of various controlled articles.

(The Bombay Chronicle, 2-8-1944).

Conference, Bombay, 31-7-1944 to 2-8-1944.

The 14th All-India Conference of Cooperative Registrars was held at Bombay from 31-7-1944 to 2-8-1944, Sir Jogendra Singh, Member for Education, Health and Lands, Government of India, presiding. Resolutions bearing on post-war reconstruction, food production, extension of the function of cooperatives, industrialisation, marketing etc. were adopted by the Conference.

Resolutions: Cooperative Development.— A brief resolution was adopted stating that the co-operative movement should be an integral part of the development plan for the country; that the representatives of the co-operative movement should be members of the various committees set up for preparing development plans; that the post-war absorption of ex-soldiers should form part of the general development plan; and that the decision of the societies should be enforced on non-members, or non-members should be required to become members, where found necessary to implement any development plan.

Increased Food Production - The resolution on increased production of food adopted by the Conference recommended, inter alia, that: (1) co-operative organisations should be fully utilised for the promotion of the "Grow More Food" campaign. (2) Provincial and State Governments should encourage the promotion of societies for growing more food and also utilise rural societies for the purpose, and help their working. (3) Governments should arrange for the necessary financial facilities, including grants, subsidies etc. for co-operative societies. (4) Governments should make available to co-operative societies the guidance and advice on the technical aspects of food production and secure co-ordination between the different departments connected with rural development. (5) Suitable arrangements should be made in each provice and state, through central co-operative organisations, for the bulk purchase of the means of production such as seeds, manure, implements, etc. and for their equitable distribution through rural co-operative societies both for members and for non-members. (6) Cooperative societies should distribute these articles to their members as short-term loans in kind wherever feasible and to non-members in cash. (7) Such loans should be given on the conditions that the whole of the produce to be marketed is sold to or through the society or a co-operative marketing society in that area. (8) The principle of joint responsibility need not be insisted on in the case of co-operative societies which undertake marketing. (9) Co-operative societies should aim at advancing loans to their members at a rate not exceeding 61/4 per cent. Government should provide the necessary financial assistance to the societies to enable them to do so. (10) Land mortgage banks should more actively undertake the finance of land improvement and reclamation in addition to providing loans for debt redemption. Departments of Agriculture should take the initiative in suggesting schemes to be financed by land mortgage banks. (11) Section 17 of the Reserve Bank of India Act should be used more widely than at present for providing the necessary finance. (12) The system of co-operative joint farming should be introduced wherever circumstances are favourable, but at least one experiment in co-operative farming should be carried out in each Province and State.

Marketing Organisation.— The Conference recommended the establishment of a chain of co-operative marketing organisations, one for each suitable area, as also federations of these marketing organisations either these for particular commodities or for particular areas, and an All-India Co-operative Marketing Organisation. Where such unions were are strong and efficient they should be appointed by Government as sole buyers in the areas in which they operate. Government should assist such unions firm

1

financially—(a) for providing the requisite godown accommodation for which purpose building material should also be made available; (b) for establishing such processing industries as are necessary for making the crop marketable with greater advantage; and (c) for the provision of the staff required for direction, supervision and guidance. A system of licensed warehouses should be introduced and legislation promoted for the purpose. S Licensed warehouses should be managed wherever practicable by co-operative warehousing societies.

consumers' Stores. That's o recommended that efforts should be made to place the consumers' co-operative movement which is expanding rapidly on a sound permanent basis. Where co-operative stores are considered by the registrar to be efficient and are willing to take up the work, they should be given preference for obtaining and distributing, both in wholesale and in retail, foodstuffs and other controlled articles and should be appointed as procurement agencies by Government. Where such co-operative stores do not exist similar facility should be given to other co-operative organisations selected by the registrar. The staff required for the direction, supervision and guidance of these societies should be provided by Government, who should also give such subsidy as is necessary for the staff entertained by the stores. Consumers' co-operative stores should be linked up wherever practicable with co-operative markeing unions.

Industrial Development. - Concerning industrial development, the conference urged a programme of development through co-operative societies to be chalked out under the direction of the Central Government for each province and State on the basis of the material available from existing surveys, Supplemented by further enquiries. It was suggested that co-operative federations should be organised in each province and large States for ensuring supplies of raw materials to co-operative industrial societies and for facilitating the proper marketing of their finished products.

Training of Staff. The Conference made several suggestions for training the staff required for the expansion of the co-operative movement. One of them was that the subject of co-operative law and theory should be included in the curricula of degree courses in economics and commerce.

Living Condition.

Milk Control in Delhi.

The Chief Commissioner, Delhi Province, has issued an Order in the third week of July, 1944, for controlling the quality and price of milk sold in the Province of Delhi by retailers and wholeselers. The Order comes into force on 27-7-1944.

(The Statesman, dated 23-7-1944).

Subsidized Milk Supply to Children in Bombay City.

The Bombay Government's Scheme of subsidized milk supply to children of Bombay city will be put into operation shortly. Under the scheme, children below two years will get helf a pound of milk each per day the Government bearing half the cost. The 200 centres to sell milk in the different wards of the city are being opened by the Rombay Municipal Corporation which has been entrusted with the task by the Government. Arrangements have begun for issue of special ration cards, against production of which milk will be issued at these municipal centres.

(The Hindustan Times, 5-7-1944).

Bombay Government to Froduce Shark Liver Oil.

The Government of Bombay, it is learned, has sanctioned a scheme for the manufacture, and marketing of shark liver oil. The scheme which has been drawn up by the Fisheries Officer of the Government will be in operation till the end of February, 1945, in the first instance. Experience proved that shark liver oil can be manufactured on a commercial scale in the Province. Government hopes to put on the market a product of approved quality and of a standard consistant with recognised therapeutic requirements. The oil will be sold at a fixed rate and will be within the reach of the poorer sections of the public.

Progress of Trade Unions in Sind, during Year ending 51-5-1945.

Number of Unions. In the beginning of the year under review there were 36 registered trade unions in Sind. 3 unions were registered during the year. Of the 39 unions, 25 submitted their returns by the prescribed date, i.e. 31-7-1943. On enquiry, it was found that 6 unions had ceased to exist and their registration was withdrawn. Another union which appeared to be defunct was served with notice of cancellation of registration. The secretaries of four unions were prosecuted and fined for unreasonable delay in submitting the prescribed returns. The objects of one of the unions submitting returns extended beyond the Province.

membership. The total membership of all unions whose objects did not extend beyond the province decreased from 9,625 to 8,934 although appreciable increases were reported from "Docks and Port Trusts" (from 962 to 1787), "Engineering" (from 203 to 310) and "Seamen" (from 184 to 285) groups. The decrease was mainly accounted for by the "Municipal" (from 2336 to 2109) and "Miscellaneous" (from 4585 to 3254) groups. In the case of the union whose objects extended beyond the province, the membership rose from 1,064 to 1,542.

Assets. Eleven unions spent more than their income during the year. Two unions had debit believes at the commencement as well as at the close of the year. The total MI assets of all unions (including the one extending beyond the province) amounted to Rs. 33,401 including Rs. 3,882 on account of unpaid subscriptions due. No union held any securities during the year. No union maintained a Political Fund under section 16 of the Act.

(Indian Labour Gazette, July, 1944).

Working of the Indian Trade Unions Act w/h

The statistics relating to trade unions given below relate only to trade unions which (a) are registered under the Indian Trade Union Act, 1926, and (b) have xunt submitted returns. No figures relating to the unregistered unions are available except for the province of Bombay, where the Labour Office collects them both in case of registered and unregistered trade unions. According to the Bombay labour Gazette, there were on 31-3-1941, 172 unions with a membership of 192,266 of which 79 with 168,344 members were registered. On 31-3-1942 the figures stood at 179 unions with a membership of 185,541 of which 84 with 152,124 members were registered.

Statistics are available only for 483 of the 727 registered trade unions in existence on 31-3-1941 while these figures for 1942 are 455 and 747 respectively. In Sind, with a view to secure the returns from

defaulting unions, prosecutions were filed against 4 unions under section 31 (1) of the Act for failure to submit their annual returns for 1941-42 inspite of several reminders and notices.

gives particulars of the number and membership of trade unions for the period 1927-28 to 1941-42:-

	1941-42	• •		747	4 55	5,73,520	1,260

The above figures relate only to those unions which submitted returns. The number of trade unions increased from 667 to 727 in 1940-41 and to 747 in 1941-42. The increase during 1940-41 was recorded in all the provinces except the following, which recorded a fall in the number of trade unions (indicated in brackets):— Assam (5), Bombay (2), N.W.F.P.(1), Sind (1), and U.P. (3). The number of unions remained the same in Orissa. During 1941-42 all provinces except Ajmer-Merwara (3), Assam (1) and Punjab (4) showed an increase although there was a fall of 21 in the number of trade unions whose objects are not confined to one province and the number of unions remained stationary in Delhi and N.W.F.P.

As compared with 1939-40 the membership of unions which submitted returns increased from 511,138 to 513,832 during 1940-1941 and to 573,520 during 1941-42, the highest figure recorded since 1927-28.

1940-41		1,212,927	786,1 20
1941-42		1,767,446	1,226,900

The total income of the registered trade unions increased from Rs. 1,121,797 in 1939-40 to Rs. 1,212,927 in 1940-41 and to Rs.1,767,446 in 1941-42; figures of the balance in hand increased during the period from Rs. 739,937 in 1939-40 to Rs. 786,120 in 1940-41 and Rs. 1,226,900 during 1941-42. The average income was Rs. 2,511-3-9 per union and Rs.2-5-9 per member during 1940-41 and Rs. 3,884-7-11 per union and Rs. 3-1-4 per member during 1944-42 as against Rs. 2,491-8-0 and Rs.2-3-1 respectively during 1939-40. The assets of many unions consisted of unpaid subscriptions due. en deficits only.

Withdrawals and cancellations. During 1940-41, the registration certificates of 88 unions were cancelled (Ajmer-Merwara 1, Assam 6, Bengal 31, Bombay 13, C.P. and Berar 2, Madras 3, N.W.F.P. 2, Punjab 11, Sind 6 and U.P. 13). Four unions were dissolved, 2 in Bombay and 2 in Madras.

upto 1-4-1941 the control of trade unions whose objects were not confined to one province was vested in the Registrar, Central Trade Unions, Delhi. These powers were delegated to the Provincial Governments since that date.

Certain additional Statistics relating to the "registered" trade unions in British India during the period 1940-41 and 1941-42 were published at pages 70-73 and 293-296 of the September 1943 and May 1944 issues respectively of the Indian Labour Gazette.

(The Indian Labour Gazette, July, 1944, pages 1 to 4).

Social Policy in Waitime

Wages .

New Scales of Pay for Lower Grade Temporary Central Government Servants in Sected Centres. +

According to a press note issued by the Government of India on 18-7-1944, the question of improving the method of recruitment so as to meet difficulties created by the war-time expansion of Government of India offices has recently been considered and the Government has decided to introduce, as soon as possible, at certain selected centres a unified pay scale for temporary clerical personnel of the departments and offices of the Central Government, other than Railways and the Posts and Telegraphs. The question of centralising recruitment for all or some of these centres is now under consideration. The new scheme will be applied only to such centres as are notified by the Government from time to time.

A common scale of pay will be applicable for the duration of the war to the staff recruited under the scheme, namely, Rs. 40-5-60-E.B.-5-100-E.B.-10-200. There would be three points of entry into the three grades, which are named A, B and C, corresponding respectively to the existing grades of Assistants, upper division clerks and lower division clerks in the Central Secretariat. The points of entry will not be the same for all centres, but will be fixed by Government for each centre beving recard to local conditions.

For the present, Government has decided to fix the entry point for Delhi and Simla at an initial pay of Rs. 100, Rs. 60 and Rs. 45, respectively, the state of the pay of Rs. 100, Rs. 60 and Rs. 45, respectively, the state of this common scale for Rombay and Calcutta, Government has fixed the points of entry at Rs. 115, Rs. 75 and Rs. 55, respectively. In addition, a deferred pay of Rs. 5 per month will be credited to the account of each such temporary Government servant payable at the end of the war. This deferred pay will be granted with retrospective effect subject to a miximum of six months. Fermanent and temporary personnel already in service in these centres will, subject to certain conditions, be permitted to elect to come on to the common pay scale. The introduction of this revised scale of pay will not affect the rates and conditions of existing dearness allowances.

(The Hindustan Times, 20-7-1944).

House Rent and Conveyance Allowances for Lower Paid Central Covernment Staff in Delhi. +

According to a press communique dated 16-7-1944, the Government of India has, in view of the existing acute difficulties regarding housing and transport in pelhi, decided to sanction, until further orders, a house rent allowance for its clerical staff employed in Delhi and to liberalize the present rates of conveyance allowance. Government will now grant a house rent allowance to all its ministerial servants

drawing pay up to Rs. 500 per month who have applied for and have not been allotted Government accommodation. It will be equal to the excess of the rent actually paid by an employee over 10 per cent of his pay, but will be subject to a maximum limit of 10 per cent of the pay. A conveyance allowance of Rs. 15 per month is at present paid to all persons living more than five miles from their office. Government has now decided to grant to the ministerial staff, who have failed to obtain accommodation within three miles of their office, a conveyance allowance of Rs. 5 per month and to those who reside more than four but not more than five miles away from their office an allowance of Rs. 10 per month.

(The Hindustan Times, 17-7-1944).

Revised Scale of Dearness Allowance and Advance Increments for Lower Paid Assam Covernment Servants. +

The Government of Assam has on 17-7-1944 gazetted a notification sanctioning a revised scale of dearness allowance in place of the existing scale of allowance inde page 25 of our report for May 1944) for its lower paid employees. The new scale will be a percentage of the pay on a sliding scale at varying rates as indicated below:-

For those taking rice concession and not free rations.

Pay per month.	Khasi and Jaintia Hills	Rest of Assam
Rs. 30 or below	50 per cent.	40 per cent.
More than Rs. 30 but not more than Rs. 60	25 per cent.	20 per cent.
More than Rs.60 but not more than Rs. 100	20 per cent.	15 per cent.
More than Rs. 100 but not more than Rs. 150	15 per cent.	121/2 per cent.
More than Rs. 150 but not more than Rs. 200	12½ per cent.	10 per cent.
More than Rs. 200 but not more than Rs. 250	lo per cent.	lo per cent.

Allewances will be granted for marginal cases at each stage so that the emoluments of a Government servant on a higher rate of pay do not fall short of those of on a lower rate of pay. The above scale of dearness allowance will be combined with the existing rice concession which will continue to be given to all those drawing up to Rs. 300 per mensem. The nofification comes into force with effect from 1-7-1944 and allowance according to the new scales will be payable beginning with the pay for July, 1944.

For those Government servants who prefer to continue to receive free rations and not rice concession together with the new scale of dearness allowance, a cash allowance of Rs. 4 per mensem instead of Rs.2 per mensem hitherto admissible will be granted with effect from 1-7-1944.

Government has also decided, with a view further to improving the starting pay of Government servants, permanent, temporary or officiating, recruited at the bottom of a scale commencing m2 at Rs. 60 or less, to sanction the following advance increments with effect from 1-7-1944:-

(1) For Government Servants with less than one year's service.....

Three increments.

(2) For Government servants with not less than one year but less than two years ' xa service.....

Two increments.

One increment.

Detailedxinstructionsxenxkhexmathad
These increments will have to be worked off

(Notification No. F.G.25/43/118 dated 17-7-1944, The Assam Gazette dated 19-7-1944, Part II, pages 694-695).

Dearness Allowance during Strikes; Suggestion of Bombay; Mill Owners' Association to Member Mills.

Reference was made at page 34 of our report for November 1943, to the recommendation of the Committee of the Millowners' Association, Bombay, to member mills regarding the rate of payment of dearness allowance to workers who put in less than a full days' work. It was then recommended that half a day's dearness allowance may be granted for attendance in the morning up to midday irrespective of the number of hours worked and that full payment may be made in cases where they had worked for more than half a day.

Towards the end of May 1944, this Question was reconsidered by the Committee and it was decided that the recommendation made previously should not be followed by member mills in cases where a full day's work was not done as a result of operatives going on strike. In cases where a full day's work had not been done on account of a strike, it was recommended that wages and dearness allowance of workers concerned for that particular day should be strictly in proportion to the number of hours actually put in by them on that day. For instance, if the operatives of a department stopped work at 9-30 a.m. after working for one hour, they should be paid 1/9th of their daily wages and dearness allowance and not 1/4th or 1/2 according to the custom and usage of mills. In the case of piece workers the question of paying proportionate wages did not arise.

(Excerpts from the Millowners' Association, Bombay, for April and May, 1944).

cost Price Greeny Shops for Migher-paid AT DAY BEST GYEES ...

About 600 grains shope have been opened in India to supply cheap food staffs to lawer-paid Railway employees. To supply the various needs of the higher-paid employees in Railways, Government is now developing a scheme to open cost price processy and consumer-goods shops. Goods not available in India will be imported.

Army Hon for Clv11 Posts under Governments:

Reference was made at page 28 of our report for May, 1944, to the decision of the Germanent of India to make emergency recruitment of civilian efficers for the Central and Provincial Governments from among Army Officers.

A press mote of the Government of India dated 25-7-1944 dealing with this desiries points out that coming to the suspension of recruitment of permanent civil servents for the duration of the war, an increasing strain has been fold by the state for the duration and a stage has not been reached the limit tended and a stage has not been reached the limit tended and made on the open market both by the as reinforcements. Continuing demands made on the open market both by the as the servence of the mass that are tended to the press that are continued to sixtle pasts, and Government has been obliged to turn to the large so the male senses from which adequate reinforcements can now be obtained. The military authorities have therefore, been approached with a request to release temperarily a sufficient number of officers whose services on to limit to stail deveraments in India.

The officers will be appointed after such preliminary training as is considered desirable for the pests. The object will be to maintain and mi strengthen the general administration and to provide sufficient staff for new and specialized branches of work, as these connected with feed and civil supplies. The appointment will be for the duration of the war in the Pay Mast and probably for limited period thereafter. The ratio of recruitment between Indians and Suropeans will be 50: 50. The total number of men required at present is 500.

(The Hindustan Times, 26-7-1944).

The decision has been severely criticised in the Indian Mationalist press.

March 1 to 15 gentless at the state of the section of

The Government of India notified on Y-Y-1944 that the following classes of industrial employees will be deemed technical personnel' for the purposes of the Batienal Service (Technical Personnel) ordinance, 1940 (Mide pages 35 to 54 of our report for June 1940): I- Managerial or Operational staff Structural engineers; II- Supervisory staff Technical assistants; and III-Skilled and Semiskilled Trades and Securations... Crusher attendants, feedwater station attendants and miller directs in comput factories, drivers of managements were vehicles, and all classes of mechanics, and several classes of Workers in electric lamp factories.

War Finance.

Control of Capital Issues (Federation of India) to Construct of India)

According to a communiqué dated 22-7-1944 issued by the Pederation of Indian Chambers of Commerce and Industry, the Committee of the Pederation has addressed a comprehensive memorandum to the government of India regarding certain aspects of the Government's recent amnouncement relaxing conditions and procedure of centrol of capital issues. (Vide pages 27 to 28 of our report for April, 1844). In the memorandum the Committee deplaces that the grant of consent to any proposed issues of capital is a difficult under certain restrictions, which are bound to effect very uncertain conditions for the new comments because Government, where itself claims to be progressing with the blue points of industrial planning, would only grant as consent. While the blue points of industrial planning, would only grant as consent. While the limited and the release of capital invested in Government socurities. If this is the case, how imposed an honest management to invite capital for a new concern under such uncertain conditions?

Referring to the Committee's suggestion that Government should assuming associate representatives of commerce and industry with the working of the control of the later than the manifestation points out that, if merch an official bear is to consider and dispose of applications for grant of permission for now fletteiens, proper development of Indian industries and to journalized. The consideration of applications, especially with regard to post-war industrial planning, release of capital on an appropriate date and priority in regard to release or import of materials, machinery, etc., requires an intimate knowledge of the country's industrial conditions and it is, therefore, absolutely essential that an effective bedy of Indian industrialists should be constituted to advise Government in these matters.

(The Hindustan Times, 23-7-1944).

Production.

coal Production and Control Measures . +

The personnel of the Coal Control Board, the constitution of which was envisaged in the Colliery Control Order, 1944 (vide page 30 of our report for April, 1944) has been gazetted by the Government of India on 28-6-1944. The Board consists of thirteen members, five officials including, the Supply Member, Government of India, who is the Chairman of the Board, the Coal Commissioner, the two Deputy Coal Commissioners of Production and Distribution and the Joint Financial Adviser, Munitions Production, and eight non-official Members nominated by the different coal interests.

Under the new colliery administration scheme now in force, the Coal Commissioner's primary task is to implement the decisions of the Government with regard to increasing the raisings of coal for the country as a whole. He will also ensure that the demands of consumers as approved from time to time by the War Resources Committee of the Council are met as far as possible. Increases in production will be attempted not only by making good shortage of colliery labour, but also through the medium of new schemes designed to intensify output in selected collieries by the use of machinery. On the distribution side, the object will be to estimate the minimum essential requirements of the railways, industries and other consumers and, when these have been approved by the War Resoupees Countities of the Council, to ensure that distribution takes place on the approved basis. The functions of the Deputy Commissioner (Distribution) include: estimation of requirements and allocation of coal, price grading, inspection and movement of coal, price fixation for coal, adoption of fuel economy measures and collection of statistics. Six regional coal controllers have been appointed for the Bengal, Bihar ${f T}$ h ${f eir}$ Punjab, Baluchistan, Assam, Central Provinces and Talcher fields. duties include: ascertaining from the collieries within their areas their essential requirements of colliery stores, bringing to the notice of the Coal Commissioner problems such as shortages of labour and transportation difficulties, and suggesting measures likely to improve production.

The Coal Control Board, which held its first meeting at New Delhi on 1-7-1944, discussed the various problems relating to the production and distribution of coal in the country. Other points discussed at the meeting included supply of foodstuffs and consumable goods in the coal fields, procurement and distribution of mining stores and equipment, labour recruitment and conditions of working of labour, restriction of working of coal seams etc. It transpired in the course of discussions that the labour question was the crux of the whole problem of increased production. It was stated on behalf of the producers that they were not averse to granting higher wages to their labour besides supplying foodstuffs and consumable goods at concession rates provided they could get better work from them. It had been found that although as a result of the introduction of the new rationing scheme for the colliery labour the attendance of labour in the fields had improved by about 30 per cent, production had not shown any increase.

At a meeting of the Andhra Chamber of Commerce at Madras on 18-7-1944, Sir A. Ramaswami Mudaliar, Supply Member, Government of India and Chairman, Coal Control Board, Ramitingxwith dealt with the long-term problems of coal production, and pointed out that increase to production was to be effected by the import of various types of machinery and the Government of India had deputed a special officer to the United Kingdom

and the united States for making the necessary predaction purchases. He hoped that some of them would be available by early next year. The present production of coal had fallen by 3,000,000 tons from the pre-war output of 25,000,000 tons, but he was sure that within the next four years, the production would go up to 35,000,000 tons. He, however, felt that even the maximum output would not suffice for the full industrial development aimed at by Government. It was therefore proposed to exploit fully the hydro-electric resources of the country as well.

(Notification No.841 dated 28-6-1944: Issued by the Supply Department, reproduced from the gazette of India Extraordinary by the Punjab Government Gazette, dated 14-7-1944, Part II, page 335; The Amrita Bazar Patrika, 3-7-1944, The Hindustan Times, 12-7-1944 and The Times of India, 22-7-1944).

Working of Multiple Shifts in Madras

in the province of madras during April 1944 there were 248 factories with 39,576 workers working on a multiple shift system. There were distributed over a wide range of industries; rice mills, however, accounted for 147, or 59.3 per cent of the number of concerns, although for only 6,042 or 15.3 per cent of the workers involved. Twenty-seven textile concerns worked multiple shifts contributing 15,960 or 40.3 per cent of the total number of workers doing multiple shifts. Three jute mills accounted for 6,469 or 16.3 per cent of the workers, followed by 20 engineering concerns employing 2,790 hands and one ordnance clothing factory with 2,600 am employees.

Control Order, 1944.

According to a Press Note of the United Provinces Government dated 17-7-1944, the Provincial Government has, with a view to ensure an adequate supply of vegetables at reasonable prices, both for the army and civil pepulation, mount has issued the United Provinces Vegetable (Movement) Central Order, 1944, which bens the expert from the province, except under permits or military credit notes, of vegetables of the certain categories.

(The Leader, dated 19-7-1944).

Success of Tortile Control Messures:

In an address at a meeting of the Paxtile Centrel Beard at Bombay on 13-7-1864, Mr. Frishmaraj Thackersey, Chairman of the Beard, reviewing the mean memoures adepted by the Textile Centrel Board, declared that beth the main objectives aimed at by the Board, namely, a substantial reduction in the prices of cloth and yayn and a considerable increase in their production within a resonable period of time, had been attained to a large extent, Statutery prices of textile goods had some down by about 60 per cent after the introduction of Centrel. Production too was running at a fairly high level throughout the period. As against an average annual production of 3,500 million yards in like, pandless production has increased about 4,500 million pards in 1845. Mendless production has increased considerably and is rapidly reaching the 2,000 million yards mark.

part of a green total of 6,000 million yards, roughly 1,200 million yards every year were to be extrarked for expert and the requirements of the Defence Services, leaving a balance of approximately 5,600 million yards of eleth for distribution in the limitation in the country.

gr. The characty also declared that transport facilities for internal distribution and improved considerably.

(The Bombay Chronicle, 15-7-1944).

Price Control.

First Mosting of Central Communes Council, Now 1811, 17 and 18-7-1944.

Reference was made at page 33 of our report for May, 1944 to the decision of the Government of India to set up a non-official Central Communer Council to advise the Government on problems relating to the civil supplies of consumer goods other than food stuffs. The Council, which was set up recently, held its first meeting at New Delhi from 17 to 18-7-1944, Sir Asizul Haque, Member for Industries and Civil Supplies, Government of India, presiding.

A deverment memorandum on the working of the various control measures was presented the to the Council. Discussions in the meeting mainly develved on these measures and Government gave assurances regarding the release for civilians of more consumer goods like brass for utensils, iron and steel for agricultural implements, and kerosene. Criticizing of the consumers representatives were directed against the unavailability of consumers made like drags, electric bulbs and footwear at the prices fixed by coordinate and the prevailence of black markets in them.

The proceedings of the Council were held in Camera.

(The Hindustan Times, 18-7-1944).

Hosting of Central Food Advisory Council,

A mosting of the Comtune! Food Advisory Council (vide pages 30 to 31 of one report for sume, 1864) was held at now polhi from 20 to 22-y-1864. Six J.P. Srivastava, Pood Rember, Government of India, presiding. The main resolutions of the Council are summarised below:

sibertime to the committee of the Council viewed the feed problem as an arguet on which must be solved as early as possible. In order to mount from the immediate father, the mosting arged on the armediate father, the mosting arged on the armediate father in the mosting arged on the same father in feetilizers, bracters and agricultural implements and daily manufacturing feetilizers, bracters and agricultural implements and daily manufacturing free the E.S. i. on the same conditions on which they repositions to breed, Earth Africa and the middle that, to would be applicable in the comments conditions of those scannings. The present feet position in this scanting is directly due to the ver and has a vital bearing as its further problemine. The supply of famile's agricultural position made should, therefore, be treated as a part of the way effort and pricate should be accorded to them.

Agricultural and irrigation advisors from outside may be employed if constituted necessary, but due bittention should be paid to the regard train-

- recommend to the control of the first that it should adopt a held policy with recommend to the control of the first that it should adopt a held policy and individual tanks. It should encourage the construction of these works on a very large scale and give very liberal financial assistance to the cultivates to match him to execute these projects. (b) All trace of manures should be distributed for increased production of irrigated food crops on a many much larger scale than has been done so far and that cultivators should be empalted here manures at 50 per cent of the cost. (c) The crop cutting experimental scheme should immediately be extended to all the what proving areas in the country, as also to the rice-growing areas in backey, hadre. Control Provinces and Grissa and if the results obtained in 1913 are again achieved, this technique may be enforced throughout the country for all ereps. (d) With a view to maintaining an adequate supply of mattle for again alture and the production of milk, all possible action should be taken to preserve them.
- the the first of Teed grains which, may be expected to be imported of the the first of Teed grains which, may be expected to be imported of the first because the two and of September, 1944, and urged Government to received urgently to me Hajesty's Government that an assurance should be diven that at the earliest possible moment shipments to India would be made of tall a million tens of feed grains to constitute a reserve, and at least on million tens of feed grains to constitute a reserve, and at least on million tens annually to cover part of the absolute deficit of feed grains in this country, marrix until normal feed conditions were feed grains in this country, marrix until normal feed confidence of the pump feed grains the feed an assurance would restore the confidence of the pump of the security made to secure and increase the internal feed recovers of the country.
- bures of the country and it deprecated the existing disparity of ration scales. It, therefore, recommended that full rationing should be

imbreduced in every previous in all urban areas and that the basic ration per lead should be uniformly 1 lb per adult per day. It urged the Greenment of India to bring about uniformity in both these matters throughout India without delay.

is diffective Procurement Resources. The Resource Council recommended the forestes, first the missages, of a sub-countities to consider the whole execution of procurement and to advise Government as to the best method of accordining and securing my the surpluses of the preserve and linking up production with precurement, with special reference to (a) the argument typhication of the Food Grains Control Order to preserve; (b) the supply of temperature posts to cultivators; (c) the provision to cultivators of such independs to irrigation concessions, supply of this choop seed and almost and Agricultural implements in return few their grain; (d) the mathematical for which landlereds can help in procurement and production of more feed product and (b) such short-term measures of rest, revenue and land return to the substance of their production.

(The Statesman, dated 23-7-1944).

Present Proj Situation in India: Government's

Food situation in India as it provailed at the Soverment of India as a meeting of the Food Advisory Council which was hold at New Delhi on to 22-7-1944. Below are given the salient features of the memorandum:

of purification to findle, was \$0,600,000 tens, as compared with 24,701,000 tens in 1962-65. Despite the statistical surplus in production, the surpluses declared by provinces and States are insufficient to meet the abatel deficite. Although lengal is statistically surplus, the december of make has elletted a large quota of rice to that province in a the take the pressure of the Calcutta demand off the Bengal markets, and thereby give a fully channe of success to the Bengal aman erop present takens and resters confidence among the people of the province.

of the principal rice supplying areas, the position in Assam is least satisfactory. The military operation on the Assam border and the persistance of inflationary conditions have made procurement difficult. Sandward machines for the army were falling behind schedule, and lately it was necessary to advance 9,000 tons of rice from Bengal to the Defence

Services in Assam. In the other main rice supplying areas, momely, C.P., Sind, Capasa, the Panjab and the Enstern States, procurement is amorally suffered by these is little prespect of further surpluses being effected by these areas, which would enable the Government of India to increase the Quotas of the deficit areas areas

and health. The rice requirements of these areas cannot be not in full, but offsets are made to supply the deficiency in rice, miliets and wheat,

Ellets. The millots even during 1943-44 is estimated at \$,568,600 tops. Toppeyer with 10,071,000 tons in 1942-45. The quantity of millets effored by the surplus areas is at present 285,000 tens. The requirements of deficit previnces are 227,000 tons. The apparent excess of millets ever requirements is, hereast, not real, firstly, because considerable amounts of millets and to be alletted to certain areas, like pombay, fravancese and deckin as substitute for their rice requirements, and secondly, because one of the principal supplying areas, namely, griderated is now mindle to effor more than 20 per cent of its volunteered surplus.

tons, the pick of wheat during the year is estimated at 9,851,000 tons, the pecking year. The result is replaced in supplies an explanate offered by the main producing produces. The pack is also expected to be inferior in quality.

could blow in Provinces: Tangel. Thanks to the harvesting of a record what How the Emphise affenged by the Central Government, conditions of widelighted has reste shortege no longer exist in Bengal. Mospt in serial director of Boat Bengal, rice has been available at or within

The lamps designment is operating a scheme for the procurement of the lamb in the last represent steadily and sufficient stocks have membered to the shift period of the langer descendent to justify the expectation that the essential requirements of deficit districts during the city he second. Procurement has slackmed lately because of the exact of the measure but it is hoped that stoody parehouse and distribution will continue throughout the crop year. Procurement plans include the studylishment of reserves at points from which peckets limble to special districts can be received. Recent relief operations have included sale of feedgrains at subsidized prices and a Government scheme of repel reticular has classified the rurel populations with the object of ensuring to the most necessitous femilies supplies that of a fair share of available feedgrains. The Bengal Government has set up a Committee under the chairmanning of Jactice Braund, to review its procurement and distribution system

rice. The feed position in Assam is relatively easy as regards rice. If which the price continues to be high, though controlled. here it was been secretage of other foodstuffs, vegetables, most, was it was been necessary to co-ordinate purchase of military and it was been necessary to co-ordinate purchase of military was all sequiroscopes. Efforts are being made to counter inflationary because in the prevince by increasing the supply of consumer goods and reducing the supply of consumer goods and reducing the supply of consumer goods.

tradely the total backy to the steep reduction of the maximum controlled prices which coincided with runeurs of a second famine in Bengal and prices which coincided with runeurs of a second famine in Bengal and prices which controlled rates by the devernment of India. The prices can be produced below the supplement in the hope of a rise in prices, and the Provincial was supplement and the permit its agents to buy above the controlled rates. The lifting of the embarge on the expert of rice and paddy from Hepal with the lifting of the embarge on the expert of rice and paddy from Hepal to the lifting of the embarge on the expert of rice and paddy from Hepal to the lifting of the order rural areas to urban markets, and prices researches began to move from rural areas to urban markets, and prices researches. The provincial overnment has built up sufficient stocks and has

estimates partial rationing to all towns with a population of 50,000

in contained. Although, swing to the lateness of the measoen and a tendency in contained at the vicible of grain there was some recrudescence of signs of discussion in the seastal area. The position is now on the whole satisfication, the previncial deverament has introduced a system of memority puralises of grain at fixed prices, and is many prepared to requisition feedgrains in areas where we hantary procurement fails. It has also subsidiced the sale of feedgrains and adopted other measures of relief to process also see landless is bourers and outtivators.

early in the year and seem other reasons, the Provincial Government has not yet been able to offer my surplemen of theat, gram and barley this year. The internal supply position is, however, fairly satisfactory though arrivable of grain in the matters are below normal, and transport difficulties complicate the problem of hooging numerous towns supplied. Schools to pation a percentage of the population have been introduced aminary working smoothly in 38 towns in the province, and the provincial everyment has a firm hold of the markets which it influences by the issue of everyment pas a firm hold of the markets which it influences by the issue of everyment species at controlled puties.

relies of the administration and the carly introduction of order retinging. The present difficulty is 1943 are caused by a failure of the millete car is before and solutionality in 1943 are caused by a failure of the millete car is before and solutionality districts. In 1944 the Business of the millete capacital for the property of the property of

experienced but an efficient system of controlled purchase and distribution to deficit districts, which has operated since the beginning of 1943, has prevented serious deterioration. Millets shortage has been reported from a number of districts, and rice shortage in malabar causes anxiety. Present stocks in the district are just sufficient for rationed distribution, but the district are just sufficient for rationed distribution, but during the number difficulties will increase, and the district's rice turing the number difficulties will increase, and the district's rice turing the home increased and is supplemented by requisitioning of locally preduced grain. Indicas is, however, punctually supplying its expert quetas under the home plane.

parage to rabi crops by unseasonable rains in March and April, localizable progressit especially of jower. The Provincial Government is structured towards a Government Toodgrains menopoly, and has fixed the parameters of the cultivator's produce graded according to acreage the parameters of the cultivator's produce graded according to acreage and yield, which is to be seld to Government for the common pool.

the fallow of the maine erop, and the reluctance of the presenting producer to part with grain. Special quotas have been allotted from the runjub and ind and high priority arranged for their movement.

44

production and arrivals of grain in the markets have been far below normal, and the markets have been far below normal, and the markets made as far are new advancing towards the controlled

plential. Look of facilities for movement and storage have slowed up parchages and caused a fall of prices.

The Walcore-Cockin. - The position in Travencore-Cockin which was very serious in 1990 has improved, although the retion in both States 13 ers. per adult per day in Travencore and 12 ers. in Cockin is still less than the susterity level in British India. The Whole area of both tates, were and urban, is rationed. As a result of last year's shortage, hereover, there is evidence of considerable under-nutrition in both the States.

Stated in the letter there has been a deterioration in the second Stated in the second Stated in the second stated in the second stated in the second second

Post-War Reconstruction.

Post-War Reconstruction Plans for Travancore State.

A twelve point programme for the post-war reconstruction of Travancore State was outlined by Sir. C.P. Ramaswami Aiyar, Dewan of Travancore, at a press interview on 1-7-1944.

The programme comprised the expansion of the present hydro-electric resources of the State, the expansion of primary and vocational education, production as of fertilisers and chemicals, utilisation and exploitation of soft wood and hard wood resources for the production of plywood and, ultimately, rayon and artificial silk, the exploitation of the mineral sand of the State for extracting valuable rare minerals like ilmenite, monazite and zircon, the enlargement of industries like aluminium, rubber, china clay and porcelain, the speedy inauguration of a large coment plant for the purpose of cement-concreting the main roads of the state and the co-ordination of road transport, controlled by the State with canal and sea traffic and the bringing into existence of a scheme for the utilisation of all the sea, backwater and road traffic in the State. The programme also aimed at the speedy inauguration of machine-tool industries in the state, enabling it to turn out spare parts for State-owned motor vehicles. He also envisaged a big public health drive comprising medical inspection of children and improvement of public health laboratories, which already supplied all the vaccines necessary for the needs of the State and improvement of fishery and purchase and utilisation of trawlers for the purpose of deep sea fishing.

rurning to the financial aspect, he pointed out that it is proposed to build up a fund of Rs. 100,000,000. Two years ago, and, in fact, before the Government of India appointed a Post-War Reconstruction Committee, the Travancore Government had set apart Rs. 5 million in its budget as a nucleus for a post-war reconstruction fund. Last year a sum of Rs. 10 million was also assigned for the same purpose and it was expected that, on account of a large increase in excise, custom, abkari and forest revenue and simultaneous increase of income-tax revenue, it would be possible to set apart over Rs. 15 million this year.

In conclusion, Sir C.P. Ramaswami Aiyar emphasised that the Travancore Government would go ahead with the schemes, independent and irrespective of any all-India plan.

(The Times of India, 3-7-1944).

Progress of Post-War Reconstruction Work

Reference was made at page 40 of our report for May, 1944 to some of the salient features of the post-war reconstruction plants plans for Bihar as outlined in the First Progress Report of the Subject Committee of the Post-War Reconstruction Board, Bihar. Subject Committees at work on the various aspects of the problem are: (1) The Labour and Soldiers! Committee; (2) The P.W.D. and Communications Committee; (3) The Agricultural and (5) The Public Health Committee. The plans of some of these committees are only in their discussion stage, although some others have drawn up provisional schemes, two of which were referred at page 40 of our report for May, 1944, and at pages 34 to 35 of our report for June, 1944. The provisions of another scheme drawn up by the Agricultural Committee are incorporated in the Bihar Co-operative Societies (Amendment) Bill recently Gazetted by the Government of Bihar. (Vide Section "Co-operation and Cottage Industries" of this report).

Employment of Demobilised Personnel. The problem of affording employment to demobilised soldiers, war nurses and other discharged workers from war industries and projects has been taken up for urgent consideration by the labour and Soldiers' Committee. The Government of Bihar has already issued orders regarding reservation of 50 per cent of the appointments in Government Department, which, pending demobilisation, are being filled on a temporary basis only. Estimates are also being obtained from each department of the Government regarding the number and nature of posts which will be available both normally as well as at a result of the operation of the various post-war reconstruction schemes.

managers of big estates in the Province have been requested to give employment to demobilised men. And estimate of culturable lands which might be available for settlement of demobilised men has also been called affor from private and Government-owned estates of each district. The Agricultural Department is taking up the question of reclaiming an land which might be suitable for the settlement of demobilised soldiers. Arrangements are also being made for starting agricultural farms, especially in areas from where large number of recruits have come.

An employment bureau and an employment exchange are being set up to deal with individual cases of employment. Arrangements are also being made for the agricultural and technical education of demobilised men.
